VEC ML Assignment 2

Problem Statement:

You can Find the dataset in my GitHub repository. Your goal is to download a specific notebook (Day 9), clean the 'age' column by handling any outliers, and then use this cleaned data to build a machine learning model.

Tasks:
1. Download the Day 9 notebook from the GitHub repository.
2. Identify and handle outliers in the 'age' column.
3. Build a machine learning model using the cleaned data.
